

Goals APP

OverView

Learning how to make something similar to this: <https://withpeers.app/>

Main Views

Feed Page View

This page will have a feed showcasing the goals that you or friends have completed that have been opted to be shared. It will allow the user to interact and react to the post. The feed page will also show new goals that have been set by friends and potential have the user to join in and partake in the same goal

Goals Page View

The Goal page will display current goals and show progress for both total completion of the goal and completion of the number of goals set for that week. This page will also contain a button below to update friends on current progress, this will pull up a sub view that allows the user to select which goal and which friends to share with along with an option to include a message.

Progress Page View

This page will contain a list of friends who are also completing goals and their total progress of the completion of the goals of the week they are on. This page will have a button to invite friends to take part in one of your goals so that they may also work on the same goal. This will have a subview with options to pick the goal and which friend to invite alongside a custom message if needed.

Milestones

Milestone 1 - View Creation

Week 1

- Setting up project in Xcode

Week 2

- Creating documentation
- Planning
- Creating diagram

Week 3

- Create navigation bar on bottom of the app with dummy symbols
- Create top bar of goal page with profile icon and goals displayed aswell as the invite a friend feature
 - will use dummy data

Week 4

- Create the progress view top bar with dummy data so when user switches view it displays correctly
- Show friend progress and current goals with dummy data

Week 5

- Create feed page where dummy data displays possible posts and goal completion

Week 6

- Create update friend in goals view to display a form that allows users to choose goals and friends from dummy data as well as write a message

Week 7

- Create invite a friend button for view page that allows user to invite a friend using dummy data

Week 8

- Create the join goal button that allows user to choose friend/goal and message to write all using dummy data

Milestone 2 - Database

Week 1

- Create local database in PostgreSQL and Vapor to interact via API to access dummy data

Week 2

- Continue last weeks task as it may take longer to do this

Week 3

- Implement way to add goals and progress and have it insert it into the database

Milestone 4 - Logic Implementation

Week 1

- Create logic for user adding new goals

Week 2

- Create logic for users updating friends
- Create logic for users inviting friends

Week 3

- Create logic for users joining friends

Week 4

- Test logic of functionalities

Milestone 3 - [Node.js](#) server

Week 1

- Look into synchronizing activities across users with a backend server

Week 2

- Create local database in PostgreSQL and Vapor to interact via API to access dummy data

Week 3

- Continue last weeks task as it may take longer to do this

Milestone 3 - Login

Week 1

- Look into making a login page

Week 2

- look into allowing user to sign in using google
- look into allowing user to sign in using phone number
